Cloudy in early A.M., raining during A.M., streets running water -

This A.M. I went to Gray Herle, and was there most of the morning. Weatherby helped me on some problems. Saw Greenman & his boy Milton, Johnston & others. Returned by 1 P.M. in the windy rain and running water -

At home this P.M. and evening. Worked on cards for our Local Flora wrote letters and was busy generally -

We are progressing with our Local Flora and are making good progress. I keep two extra copies of Rhodora and shall make a book of it, though much will be rather ancient. That is inevitable.

Clear, mild, snow dis-
appearing, calm -

This morning I walked
down to the P. O. and Harv.
invest. made a deposit,
bought postage stamps
and walked back home
calling on P. O. Lord & Mrs. Seales and
meeting Brogl on the way.

Rumortan appeared
by 1.30 and we worked
on the local flora in
great shape till the
middle of the evening
finishing Solanaceae
and Scrophulariaceae.
That was great work -
I shall rejoice when
we finish Hieracium,
for that is the last genus.
I think the work will be
useful. No work of this
kind, coming out at in-
tervals can be up to
date at the finish.
We shall keep at it.

Cloudy Am., snowing in P.M.
and through the evening.
Real winter coming - mer-
cury not low -

This Am. I took some
problems over to the Gray
Herbarium. Saw J.M.
Greenman and bade him
good bye. He is now on his way
to St. Louis. I have enjoyed
seeing him so much.
Rydberg named some sheets
of Physalis for me -
Home to lunch -

This P.M. worked at home
on various things.
Went in to the Public
Library and met Miss
Brown there at 6.30.
We took lunch nearby and
walked down to the Bot.
Soc. Nat. Hist. and heard Bar-
bour on his Panama ex-
periences. collecting. Very good.
met friends. Home by 10.20

Big snow storm last night and through the A.M. Snow light. Sun came out in P.M.

A real winter day. The snow effects on the trees & shrubs is wonderful. This A.M. I worked at home. About noon I worked down to the Goodales. I sat some time with Mrs. Goodale who is well.

Dr. Goodale is in bed with trouble in the groin, some kind of auto-intoxication. It is thought. He has suffered a good deal but was more comfortable and on the sofa up stairs. I did not see him - but G. feels encouraged.

P.M. I remain at home over acct, letters and work on Local Flora. In the latter we are pushing ahead

Sunny, mild -

This Am. I took to
Gr. Hb. a lot of my
Potamogeton for
Wm. Fernald - I named
a few plants Griff gave
me in Local Flora,
and made some cards
in Gr. Hb. Compositae.
Saw Weatherly, Rydberg &

Then went in to Boston
W. & R. Churchill's -

We lunched together
at the Georgian Cafeteria
and had a good talk.

Then I returned home
and rested some.

This evening I worked on
my Annual Report for the
Shakespeare Club -

3 deaths & 2 resignations
during the year -

We must have a new
2^d Vice-Pres. & Treasurer.
Clara Howe will resign.

distributing cards, etc.
we are making good
progress.

The botanists who have
been at the Gray Herb
during the week have
gone - Weatherly called
me up last evening. He
was alone at the Gray Herb.

He told me that the

This morning I went
over to Dorchester and
spent the day with J.R.C.
& family till 8 P.M. We
worked very quietly not
getting over much ground
but discussing nomen-
clature in several cases.
Without authentic ma-
terial to use for compari-
son, it is not easy to
identify with certainty.

In the P.M. we saw in
the snow back of the house
a small brown rabbit
floundering about. Anna got
it & found it was a very young
Belgian Hare that belonged to
some boys near by - They could not
get it - Its eyes were not open.
I returned home at 8 P.M.
Time from Andrews to H.Sg. 16 min.

Snow, rain, cold - Road almost impassable.

It has been a very hot day and I have kept the house.

Miss Brown has felt some irregularity in her heart beats & Dr. Houghton came this Morn. & prescribed. It may be due to cocaine that was put into her finger when she had it opened last Wed. Jan. 3. She has kept on her back quietly to-day, and is comfortable. Lizzie is getting over her lameness.

I am quite well. I did not go to the W.O.L. this week.

The day has been spent in writing, reading, arranging my cards &c. was. A number I shall answer.

It has been a very comfortable day without and I felt home was better.

notice of Kittredge's lec-
tures at Sanders Theatre.

Walked to Harvard Sq.
at noon to Hail Trust
etc. etc. The walking

is very bad indeed, &
I don't know when it
has been worse -

Miss Brown has had
a comfortable day. She
has lain on the sofa

I wrote a good many
letters to distant friends,
with whom I corres-
pond once a year.

One was Mrs. Richardson
Wattie Beble, old days.

She is well and happy in
California (Porterville)
with her husband and
four children.

Miss Brown has had a
very good day and has
moved about some as
of old. She has got to
be very careful though,
and let things resume
their accustomed sway.

The doctor will call
again to-morrow.

I read a bit to-day

except at times a feeling
from the finger up the arm.

A most unusual event,
Mrs. Balser (Ada), is to be with
her, night & day. She will go
home a little while today -
I am alone in # 29 -

I have been busy at
one thing or another
today, not feeling much
like doing anything.

This a most unusual

Sun partially obscured by
dull clouds -

I have not felt as
bright to-day as I hoped.
It will be some time
I fear ere this is gone.

Emile Williams called
this P.M. & we had a very
pleasant chat in my
study - He has regained
much of his old self, but
the dizziness still holds
on somewhat. He moves
about alone though.

I have spent some
time to-day over my
Pazis cards. I have a
good many to enter.
It is slow but interesting.

Miss Brown keeps on the
same, and I can't see
the end. She is in bed,
most all the time, moving
about at times, a very little
slowly. It seems a long pull.

Clear. mild, Sunny.

Mr. Houghton called this morning at Miss Brown's, request. He is very quiet. I must still be very quiet and not overdo, even in the morning about at home I shall go out on to the piazza and pass up & down when the day is warm enough. Miss Brown is getting on steadily -

I have been quiet all day. George called this P.M. & we talked a good deal. I have straightened out my Federal tax, I think, except for the Liberty Loan part of it - Mr. Ramhofer will help me on that.

Ada's sister & little boy called this P.M. - Cunningham boy - May Dexter called. The Celab last night was a success -

**DR. MILLSPAUGH,
BOTANIST, DIES**

X Sept. 17/1923.

**Field Museum Curator
for Twenty Years.**

Dr. Charles Frederick Millspaugh, curator of the department of botany at the Field museum since 1893, died in the Presbyterian hospital late Saturday night, following several weeks' illness of pneumonia. Dr. Millspaugh, who was 69 years old, was one of the country's foremost authorities on botany.

The son of John Hill Millspaugh, famous etcher, and nephew of Ezra Cornell, founder of Cornell university, Dr. Millspaugh was born in Ithaca, N. Y. He was educated at Cornell and the New York Homeopathic college, obtaining an M. D. degree from the latter in 1881.

His Scientific Field Wide.

Dr. Millspaugh was a practicing physician in New York state until 1891, when he went to the University of West Virginia to complete a two years' course in botany. Then he came to Chicago.

Development of the Field museum department of botany as the greatest exposition of economic botany has been credited chiefly to the personal effort of the curator, who labored for nearly thirty years to achieve what will now stand as a monument to his knowledge and enterprise.

But Dr. Millspaugh's standing did not rest solely upon his work here. He had done extensive exploration work and was a lecturer who was much sought.

Experienced As Explorer.

Dr. Millspaugh explored in Mexico as early as 1887 and as late as 1900, four times in all; the West Indies, Brazil, and a number of uninhabited Bahaman islets, in 1904.

The Field museum curator of botany had been a professor of medical botany at the Chicago Homeopathic college since 1897 and a lecturer at the University of Chicago since 1895. He was a fellow of the American Academy of Arts and Sciences, of the Ex-

plorers' club, and various other scientific organizations. He was the author of several authoritative books on botany.

A widow, Mrs. Clara Mitchell Millspaugh, and two children survive. The family home is in South Chicago. Funeral arrangements had not been made last night.

States to Get Pieces**of Washington Elm***Boston Herald - Oct. 19, 1923.*

Historic Washington Elm is to be cut down and a piece of it sent to every state in the Union, the District of Columbia and Alaska. This was decided upon last evening at a meeting of the Cambridge park commissioners with Mayor Edward W. Quinn. One side of each piece of wood sent out will bear the seal of the city of Cambridge and the other side an appropriate inscription. The tree, officially pronounced dead by a tree scientist, is now said to be a menace.

FOSSIL PLANT FOUND

Boston Transcript Nov. 10/23
**May Have Been the Prehistoric Ancestor
of the Maize**

[Selby Maxwell in Chicago Tribune]

The science of botany may be revolutionized by the discovery of the stem of a plant no larger than the base of a corn stalk. The new growth lived on the earth in the age of coal, and its remains were found embedded in a lump of Illinois limestone by Professor A. C. Noe of the University of Chicago.

The remarkable thing about the stem, and the fact that has made botanists all over the world regard it with wonder, is that it bore flowers. Flowers in coal beds have hitherto been unknown, and scientists have believed they were not evolved until long after the age of coal was over. The surprise that this new plant has created among botanists is no greater than would be the amazement of historians to discover that there was field artillery in the army of Alexander the Great, or printing presses in the time of King Tut-Ankh-Amen.

Related to Corn

The plant was a sort of giant grass, related to corn and rushes. Breeders of grasses have long realized how hard it is to make these plants alter their forms. Of the great group of grasses only oats, wheat, rye, corn, sugar cane, timothy and a few others have been tamed by man. Compare this with even a single hardwood pare this with even a single hardwood family, the roses, which yields apples, peaches, pears, plums, apricots, strawberries, raspberries, blackberries, quinces, hawthorns, cherries and a host of flowering forms. The rose family is a comparatively recent evolution, and its characters are still plastic. But the grasses are now proved to be as old and hidebound as ferns, and require much work to break down their set habits of growth and make them be something besides weeds.

Hardiness Now Explained

The reason for the hardiness of grass is now clear for the first time. It can choke out most other plants, not because of its superior plant design as has been hitherto supposed, but because it has developed unusual toughness and fighting ability in the millions of years of start it has had over our other common plants.

New Snowless Record Set as Winter Starts

Bost. Herald. Dec 22/23.

For the first time in 50 years at least the winter season will officially start at 3:54 o'clock this afternoon without there having been a fall of snow enough to be measured. This, of course, is with the provision that no snow falls before that hour this afternoon.

no snow at 9 P.M.
Another weather mark was broken yesterday, when the experts at the bureau here announced it was the warmest Dec. 21 on record. The previous high reading for this date was 58 degrees in 1918. At 1 o'clock yesterday afternoon, the temperature reached 60 degrees. The minimum for the day was 46.

The bureau predicts rain today and tomorrow, with little change in temperature, with moderate to fresh northeast and east winds, probably shifting to west Sunday.

BALMY WEATHER SENDS MERCURY TO 61 IN N. Y.

NEW YORK, Dec. 21—With Winter officially due tomorrow, New York today experienced balmy summer weather, the thermometer touching 61 at 1 o'clock, and breaking all previous records. The weather bureau reported that the previous warm record for December was 56 in 1895.

The temperatures hovered above the 50s all day, starting off at 52 at 7 A. M.

GREENFIELD HAS TEMPERATURE OF 54

GREENFIELD, Dec. 21—The last day of autumn found a temperature of 54 degrees prevailing at 1 P. M. Angle worms were observed crawling on the sidewalks today. One year ago the temperature was 12 degrees below zero and there was a heavy blanket of snow on the ground.

1 MINUTE TO ANSWER THIS

If it be true that winners can only gain as much as the losers lose, then how do you explain the following truthful rhyme?

Four jolly men sat down to play,
 And played all night till break of day;
 They played for gold and not for fun,
 With separate scores for every one;
 Yet, when they came to square accounts,

They all had made quite fair amounts!
 Can you the paradox explain?
 If no one lost, how could all gain.

ANSWER TO YESTERDAY'S

It was the jazz band in action.

This afternoon I worked
on acct. and finished
Hector Hugo's "The Hunchback
of Notre Dame". The moving
picture show of this at Vermont
couple is so utterly wrong
in the characters that it is a
wicked shame to allow it.

Later I called on Mr. &
Mrs. Moses White. He is
working for Cabot. This evening

(This A.M.) I walked down to Appleton Chapel and met G. A. Weatherby there. Wonderful service. Sermon by Rev. Chas. R. Brown, Yale Minister. Thrilling sermon as I ever heard even ladies were standing. We walked home after the Dedication of a Service Banner - Exquisite singing by the choir.

A while after dinner Weatherby left, and later Marion Lord et hus band came in car & took me over to Newton to their home on the old Lord Estate, met their Roger & wife. We all had a very delightful time talking. Taylor was in the War & he had loads of photographs. I took over half a dozen of my bot. sheets and all were intensely interested in the story of an herbarium & its use. Later they drove me back home. Perfect time. Filled my marsh plants additions to my flora of 1915.

SEE OCCULTATION OF VENUS

Harvard Observatory Makes No Scientific Observations of Astronomical Phenomenon

As far as the Harvard Observatory is concerned Venus remains uninhabited. The occultation of the planet by the moon, which occurred this morning just before sunrise, although it was regarded as a beautiful and inspiring phenomenon, yielded no observations at Cambridge which would throw light on the problem whether there is intelligent life on the world's celestial neighbor.

Professor Edward S. King of the astronomy department at Harvard, who was at the observatory this morning, explained that no serious attempt to study the event was made by the observatory staff, as research work of that kind is outside the field of investigation for which the observatory is equipped. Professor King, however, watched the occultation through a ten-inch telescope, from the time it began at seven o'clock until it was completed at 7:22. At no time was the planet completely obscured. The greatest diminution of its light was at 7:10.

To the amateur star gazers who watched the unusual event with the naked eye, the planet, which is now approaching its greatest brilliancy, seemed to touch and almost come within the crescent of the moon, giving an illusion of an ocular demonstration of the poet Coleridge's much criticised line describing the moon with one star "within its nether tip." The atmosphere was clear, and in the faint light afforded by the rising sun the spectacle was one of rare beauty. The occultation of Venus is the first that has been visible in Boston or vicinity for forty-five years, the last one taking place on Dec. 7, 1877. Incidentally it may be explained that occultation is a term applied to the eclipse of stars or planets, while eclipse is reserved to describe a similar phenomenon in connection with the sun or moon.

VENUS ECLIPSE IS VALUELESS

Harvard Astronomers Un-
able to Discover New
Facts About Planet

CLOUDS INTERFERE WITH OBSERVERS

The eclipse of the planet Venus, visible here about 7 o'clock yesterday morning, proved of no scientific value, according to astronomers at the Harvard observatory in Cambridge, who had hoped to discover facts throwing further light on surface conditions and the possibility of life on Venus.

Asst. Prof. Edward Skinner King stated that the eclipse, as seen through the huge telescope lens, was not complete, as part of the brilliant planet was visible above the moon's crescent throughout the entire period of occultation. The part which remained visible was shown to be obscured by clouds such as have always prevented astronomers from arriving at anything like definite information about Venus.

mem p. 2.

UNABLE TO TAKE PICTURES

Data with respect to mathematical deductions and compilations, however, were obtained by observation of the eclipse, according to Asst. Prof W. P. Gerrish. He explained that while climatic conditions are such as to make life possible on Venus, questions of habitability must remain a matter of speculation, due to the inability of observers to obtain photographs of the surface.

Observers in Chicago reported that Venus was invisible there for nearly 45 minutes. While this phenomenon was said by astronomers at Yerkes observatory at Lake Geneva, Wis., to be not unusual, it rarely occurs that the paths of the moon and Venus cross in such a manner as to cause a darkening of Venus. Within the course of a month, they said, 15 or 20 stars will be overrun by the moon, although this occurrence is not always visible at night.

Shakespeare Lectures

A course of five public lectures by Prof. Kittredge, at Sanders Theatre, on "Five Tragedies of Shakespeare," will begin on Tuesday evening, Jan. 16, and continue on Tuesdays and Fridays. A curious history lies behind this enterprise.

Thomas Dowse, a leather-dresser in Cambridgeport, had scarcely any schooling, was apprenticed to his trade as a boy, and continued in it until his death, at the age of 84,

having lived, unmarried, in rooms above his shop. He once said to Mr. Ticknor: "When I was 28 years of age, I had never had any means but the wages of a journeyman leather dresser, at \$28 a month; I had never paid \$5 for travel anywhere, and never worn a pair of boots, but I possessed several hundred books, well bound."

This love of reading and collecting books developed with his prosperity, and before his death his library, estimated as costing \$40,000—and now worth many times that sum—was conveyed to the Massachusetts Historical Society, making him at that time its chief benefactor. His executors, authorized by his will to distribute the residue of his estate "for literary, scientific and charitable purposes," conveyed to the City of Cambridge \$10,000, on condition that \$600 a year should be paid "every year forever, to provide one or more courses of lectures of the highest character on literary and scientific subjects."

This foundation, established in the golden age of lyceum lectures, attracted the most notable speakers. The names of Ralph Waldo Emerson, Henry Ward Beecher, Oliver Wendell Holmes, Wendell Phillips and many other personages of that period, appear in the early list. Prof. Kittredge is a worthy successor of these masters of public address, and his hearers will listen with unusual pleasure to his wise and brilliant interpretations.

TROWBRIDGE—At Cambridge, at his home, 58 Linnaean street, Feb. 18, John Trowbridge, late Rumford Professor Emeritus, Harvard University, in the 80th year of his age. Funeral at Christ Church, Cambridge, Wednesday, Feb. 21, at 3 o'clock.

DEATH OF PROF. TROWBRIDGE

He Was Prominent in Physics Department at Harvard Until Retirement in 1910, and Was Foremost in Building Jefferson Physical Laboratory for Which He Raised the Money

John Trowbridge, late Rumford professor emeritus at Harvard, and one of the best-known physicists of his time, died yesterday at his home, 58 Linnaean street, Cambridge, where he had resided ever since his marriage forty-five years ago. He had been ill only two days and last Tuesday had shovelled snow around his estate. Although in his eightieth year he had enjoyed unusually good health until taken ill last Friday.

Professor Trowbridge was born in Boston in 1843, and was the son of John Howe and Adeline Trowbridge. He received his degree of S. B. from the Lawrence Scientific School in 1865, and his S. D. in 1873. While yet a young man President Eliot called Professor Trowbridge to the physical department at Harvard which then consisted of two small lecture rooms. Professor Trowbridge, realizing the need of larger quarters began to interest his friends in his project, and almost alone he was able to raise the money to build the Jefferson Physical Laboratory at Harvard, which today stands as a monument to his enterprise and activity. He even made the designs for the building in conjunction with an architect, and gave all the work his most careful attention until the building was completed. Of this Jefferson Physical Lab-

oratory, generally looked upon as his contribution to the world of science, Professor Trowbridge was for many years a director. Altogether he gave forty years of his life to developing this science, resigning active participation in the fall of 1910.

Before entering on his great work Professor Trowbridge was assistant in mathematics at Harvard from 1866 to 1869, and for the following year he was professor of physics at the Massachusetts Institute of Technology. From 1870 to 1880 he was assistant professor in physics at Harvard and it was then that President Elliot focussed his attention on him as one destined to advance the science of physics to an unusual degree.

Professor Trowbridge was a member of the National Academy of Arts and Sciences, the American Academy of Arts and Sciences, and the American Philosophical Society. He had written many papers on physics particularly on matters touching the electrical field and he had been a delegate to several national and international congresses of electricians. He also was the author of many volumes.

In 1875 Professor Trowbridge married Mary Louise Thayer. She died in 1907. His survivors are an adopted daughter, the wife of Edmund M. Parker of Cambridge, and a sister, Mrs. E. Sumner Mansfield.

Prof. Fay on Faculty Since
His Graduation from College
Feb. 25/923.

Fifty-five years of teaching at one college, is the record held by Dean Fay of the graduate school of Tufts College. His nearest rival, Dean Perkins of the University of Vermont, lacks one year of the mark set by the Tufts professor.

Charles Ernest Fay entered Tufts as a freshman, in 1864, and graduated in 1868, with the degree of A. B. He immediately became a member of the faculty and has remained since, this year being his 56th in the service of the college. Between 1868 and 1923, Prof. Fay has acquired the degree of A. M. and Litt. D. He is also Wade professor of modern languages and dean of the Tufts College graduate school.

A few years ago he was president of the Tufts chapter of Phi Beta Kappa.

Prof. Fay is widely known and popular in other than academic fields, having made an enviable reputation for himself as a mountaineer in the Alps, the Canadian Rockies, where a peak has been named after him, and in the Appalachians. He is actively associated with several national and foreign mountain climbing societies, and was recently knighted by the Count of Monaco for his work in exploring and conquering various parts of the Swiss Alps.

Today, although in his 79th year, Prof. Fay leads a life as active as any of his younger colleagues at Tufts and is universally admired and respected by his students for his physical as well as his intellectual energy.

Fair and cold weather today and tomorrow will follow yesterday's snow. The storm came only one day later than the third anniversary of a veritable hurricane which wound up Boston's last "snow winter." On March 6, 1920, the wind attained a velocity of 80 miles an hour at Blue Hill. Yesterday's maximum was 75 miles an hour. Three years ago, there was a snowfall of 12 inches. Yesterday's fall was nine inches. After the passing of the storm in 1920, the mercury dropped to 12 above at midnight, while last night's reading was 14 above.

PROF. GEORGE L. GOODALE DEAD

He Was Long Identified with Natural History Department of Harvard and Was Director of Botanic Gardens Until His Resignation in 1909, Since Which Time He Had Resided Quietly in Cambridge

Professor George Lincoln Goodale, for many years Fisher professor of natural history and director of the botanic gardens at Harvard, died this morning at his home, 5 Berkeley street, Cambridge. Professor Goodale was born at Saco, Me., Aug. 3, 1839, and he was the son of Stephen Lincoln and Prudence Aiken (Nourse) Goodale.

Date.

He studied at Amherst and receiving his bachelor's degree from this college with the class of 1860, he went to Bowdoin and entered the medical department of that institution, obtaining the doctor's degree three years later. The list of degrees with which his scholastic attainments have been rewarded is a considerable one.

Six years after his graduation from Amherst he received the honorary degree of master of arts from the same college, and three years later received the same degree from Bowdoin. From Harvard he also received the degree of doctor of medicine, this distinction being conferred in the same year in which he took his doctor's degree from Bowdoin. A still greater recognition of scholarship came from Amherst in 1890, from Bowdoin in 1894, and from Princeton University two years later, when these three institutions conferred upon him the degree of doctor of laws.

As a teacher, his influence was widespread. His first work in this capacity was at Bowdoin, where from 1867 to 1872 he held a professorship in natural science. During this same period he also served as professor of materia medica at the Medical School of Maine. In 1872 his first active connection with Harvard began. Coming to Cambridge for the first year as a lecturer on vegetable physiology and instructor in botany, he became assistant professor in the former subject in the following year, a position which he held until 1878. In this year he was appointed professor of botany, a chair which he gave up ten years later to become Fisher professor of natural history.

After a long and interesting career at Harvard Professor Goodale resigned his relation with the college in the spring of 1909 but the Harvard Corporation subsequently created him professor emeritus in the Fisher professorship of natural history, this appointment dating from Sept. 1, 1909. His connection with the university, dating from 1872, has been surpassed by very few members of the faculty body.

PROF. G. L. GOODALE OF HARVARD DIES

Amherst Graduate Joined Faculty in 1872

Prof. George Lincoln Goodale, for many years Fisher professor of natural history and director of the botanic gardens at Harvard and since 1903 professor emeritus, died yesterday morning at his home at 5 Berkeley street, Cambridge.

He was born in Saco, Me., Aug. 3, 1839, the son of Stephen Lincoln and Prudence Alken (Nourse) Goodale. He graduated from Amherst in the class of 1860.

From 1867 to 1873 he was professor in natural science at Bowdoin and at the same time served as professor of materia medica at the Medical School of Maine. In 1872 he went to Harvard as lecturer on vegetable physiology and instructor in botany. The next year he became assistant professor in the first-named subject and in 1878 was appointed professor of botany. In 1888 he became Fisher professor of natural history and resigned that chair in 1899. The Harvard Corporation then created him professor emeritus, dating from Sept. 1, 1909. His record of continuous connection with the faculty of Harvard has been surpassed by few others.

He married in 1866, Henrietta Juel Hobson of Saco, Me. She survives, as do two sons, Dr. Joseph L. Goodale of 258 Beacon street and Francis G. Goodale of Weston. There is also a surviving brother, Dr. Walter Temple Goodale of Saco.

DID MUCH IN BOTANICAL FIELD

Emily Frances Fletcher of Westford Had Been Contributor to Gray Herbarium and Had Made Complete Collection of Pressed Flowers of Her Native Town

Emily Frances Fletcher, who died at her home in Westford, was born in that town Jan. 17, 1845, the daughter of Sherman Dewey and Emily Augusta Fletcher. She was a student at Westford Academy under the preceptorship of the late Governor John D. Long, and had been closely associated with the activities of the town. Miss Fletcher was a member of the Unitarian Church and a member of the Woman's Alliance and the Tadmuck Club. She was a lover of nature, her contributions to the science of botany having brought her much fame. She frequently recorded interesting plants appearing on fields fertilized with wool waste and had sent some notable specimens to the Gray Herbarium. Her most important discovery was at Westford, when she found the "Wessadula Callimorpha" a native of eastern Bolivia and adjacent Brazil, which was not known to science until 1906, and even now is represented by only three collections.

She had made a complete and beautiful collection of the pressed flowers of her native town. She was a member of the Gray Memorial Botanical Chapter of the Agassiz Association and the New England Botanical Club. Miss Fletcher was an expert taxidermist and gave a valuable collection of native stuffed birds to the J. V. Fletcher Library a few years ago.

She is survived by her brother, Captain Sherman H. Fletcher, and two nieces, Gertrude D. and Julia H. Fletcher of Westford.

HOTTER THAN ANY DAY ALL LAST SUMMER

THERMOMETER AT 94 DEGREES AT
3 P. M.—THUNDER STORMS EX-
PECTED TONIGHT

Reaching 94° at three o'clock this afternoon, the "hot wave" now holding Boston and vicinity in its grip passed the "high" for this year and went one degree above the hottest day of last summer, July 13, when the mercury reached 93°. Local showers and thunderstorms are expected to clarify the atmosphere tonight.

No record has been broken to noon in the condition which obtains generally across the country. Humidity stood at sixty-five, a little lower than yesterday, and three degrees lower than normal for this season. Where the temperatures ran from 61 degrees to 79 degrees between one A. M. and eleven A. M. yesterday forenoon, the range today was from 72 degrees, low, at five A. M., to 88 degrees at eleven A. M. Between seven and eleven o'clock the increase was thirteen degrees.

Despite the mounting temperature this morning there was some relief in the breezes which crossed the city. This will continue, it is indicated, in moderate to fresh southwest winds, turning slightly cooler tomorrow. The forecast calls for "unsettled," probably local showers and thunderstorms tonight and Wednesday.

**\$10,000 SCHOLARSHIP FOR
HARVARD STUDENTS**

A \$10,000 trust fund from which to provide a scholarship for Harvard graduate students is created by the will of Mrs. Mary W. Davis, of this city, who passed away on July 13. Her will was filed for probate in the East Cambridge Court on Thursday afternoon.

The bequest is made to the president and fellows of Harvard College, in the names of Susan Wyman and Mary Wyman Davis, daughters of the late Jeffries Wyman, and provides that the \$10,000 be held in trust and the income used each year for some student, in one of the graduate departments, who has given promise of success in some branch of biological research. It is provided, however, that the income may be divided in any one year among two or more students who by industry, good conduct and zealous effort, shall be deemed meritorious students and entitled to encouragement. They are to be known as the "Jeffries Wyman Scholarships."

The will establishes trust funds, one of \$20,000 and one of \$40,000, for the benefit of Helen W. Aiken and Jeffries Wyman, Jr., niece and nephew of Mrs. Davis.

Jeffries Wyman, a brother of the deceased, is named as residuary legatee for life, and upon his death the residue is to go to the nephew and niece. No valuation of the estate is contained in the will.

HARDING—At Milton, Sept. 22, Benjamin F. Harding, in the 66th year of his age. Notice of funeral services later.

BENJAMIN F. HARDING DEAD

He Was a Member of the Harvard Class of 1878 and Had Devoted His Life to the Education of Boys

Benjamin F. Harding, well known as an educator in Belmont where he formerly conducted a school for boys, and for the past twenty-four years connected with the faculty of the Milton Academy, died this morning at his home on Canton avenue, Milton. Mr. Harding was in his sixty-sixth year. He was born Oct. 27, 1857, and was the son of George S. Harding of Savannah, Ga., and Louisa (Tucker) Harding of Boston.

Mr. Harding prepared for college at St. Mark's School, and entered Harvard, where he was graduated in 1878. He returned for a post-graduate course and received the degree of A. M. the following year. He entered upon his life work, which was that of educating boys immediately afterward and was a member of the faculty at St. Paul's School at Concord for several years. He afterward went abroad for study and upon his return in 1890 founded a school of his own on the old Cushing estate in Belmont.

He continued to conduct this school through 1900 when he became affiliated with the faculty at Milton Academy. He had been at Milton ever since. Mr. Harding was always interested in every line of athletic endeavor and was recognized as an excellent golfer. In Milton he was prominent in the affairs of the Hoosic-Whisick Club of which he was a member.

He is survived by his wife and by two daughters, Mrs. James Mott Abowell of Chestnut Hill, and Mrs. Walter K. Earle of New York City. Mr. Harding was a cousin of Rear Admiral John Hubbard, U. S. N., retired.

RECENT DEATHS

WIFE OF BOSTON PHYSICIAN

Mrs. Mary C. Thorndike Since Her Marriage Had Made Her Home at 20 Newbury Street

Mrs. Mary Cayford Thorndike, wife of Dr. Thomas Townsend W. Thorndike, a Boston physician, died yesterday at 20 Newbury street, which had been the family home ever since Mrs. Thorndike was married in 1907. She was a native of Skowhegan, Me., the daughter of Charles Cayford and Mary (French) Cayford. Mrs. Thorndike had had several activities to which she had given her attention, among them the Household Nursing Association, and she was a member of the Women's City Club and the Emmanuel Church. Besides her husband she is survived by three young children, three brothers, Maurice Cayford of Skowhegan, Luther Cayford and Howard Cayford of Saskatchewan, Canada; and two sisters, Mrs. Alonzo Smith of Skowhegan and Mrs. Herbert L. Burrell of Boston.
